Feeding guide

- Commence feeding at a rate of 0.25 % of body weight / head / day. Increase gradually over a 3 week period to 0.75-1.0% of body weight or at rate required to achieve target feeding goals.
- Introduce pellets gradually and do not allow pellet supply to run out.
- Feed in troughs or feeders. When feeding in self feeders, pellet intake can be regulated by adjusting the shutters. Lowering the shutters will reduce intake.
- Ensure good quality roughage such as pasture, hay or straw is available at all times.
- Ensure sufficient trough space to minimise competition.
- Ensure supply of fresh, clean drinking water at all times.
- Call a Nutramix Representative for more information.

Warning

- Use strictly as directed
